Evidence-Based Public Health

Ideal for: Professionals working in Public Health, Mental Health, Public Policy, and Global Health

Take your evidence-based decision-making skills to the next level! Through this course, you'll learn to develop a concise written statement of a public or community health problem, issue, or policy—and how to measure it. Explore various data sources, practice methods for prioritizing program and policy options, and learn about planning and logic models. Finally, you'll learn how to conduct an economic evaluation and concepts of measurement validity and reliability.
